To whom it may concern,

I am writing to recommend Mr. *Sina Heydari* for admission to your Ph.D. program. I have known Sina for the past 3 years in multiple capacities: as his instructor, as his teaching assistant supervisor, and most recently as his Master's thesis advisor.

First, Sina took three of my graduate-level courses: *natural language processing*, *advanced artificial intelligence*, and *multi-agent systems*. In all, he performed solidly at a good level, placing him among the top 10% of students in my classes. He was consistently well-prepared, attentive, and diligent. His term papers and exam scores were reliably strong, demonstrating a clear grasp of both core concepts and more nuanced material. He was a serious and engaged participant who asked thoughtful questions.

In addition, Sina served as a teaching assistant for my *text and web mining*, and *large language models* courses. He did an acceptable job in this role. He was reliable with grading and administrative tasks, held his office hours punctually, and was responsive to student queries. He fulfilled all his responsibilities adequately, and I had no concerns about his performance.

More importantly, I supervised Sina's Master's thesis, titled "*text-based multi-level automatic personality prediction system*". In this capacity, he performed assiduously. He approached the research question methodically, worked through challenges with persistence rather than frustration, and completed the project within a suitable timeframe. His work ethic during the thesis phase was commendable; he met every deadline and was receptive to feedback without needing constant hand-holding.

Furthermore, I am pleased to note that we have recently submitted a journal paper based on his thesis work, entitled "*HyperPersona: A Multi-Level Hypergraph Framework for Text-Based Automatic Personality Prediction*", to a prestigious journal (currently under review). During the writing and revision process, Sina revealed several positive qualities: he was patient, detail-oriented in addressing reviewer comments, and learned quickly how to structure a formal research article. This experience confirmed for me that he is ready for the next step. In addition, Sina and I are currently working on another research project focused on personality prediction, and we are continuing our collaborative research efforts in this area.

In summary, I recommend Mr. *Sina Heydari* with high confidence for admission to your program. He is a high-performing student with strong foundations in computer science, proven research potential, and the maturity and motivation required to thrive in a rigorous academic environment. I believe he will make meaningful contributions to your department and will continue to grow into an excellent researcher and engineer.

Please feel free to contact me if you require further information.

Sincerely,

Majid Ramezani
